OCONOMOWOC, WI - Celebrating its 25th anniversary, the Associated Recyclers of Wisconsin (AROW), proudly held their annual awards ceremony at the 2016 Wisconsin Integrated Resource Management Conference (www.wirmc.org). The ceremony, held on February 25th in Oconomowoc, recognized individuals and groups for outstanding work in the field of recycling and waste reduction. This year AROW presented four awards:

- One to an individual recognized for her excellence in recycling education whose dedication and enthusiasm has encouraged and enhanced recycling education in Wisconsin;
- One to two cities in western Wisconsin who worked in collaboration to develop and implement automated, single stream recycling collection for their communities;
- One to an exemplary Public/Private Construction & Demolition Recycling Facility Partnership; and
- One to a Dunn County Solid Waste Director who has been a dedicated participant and steward in the Wisconsin waste and recycling industry for 27 years.

“As the voice for recycling and waste reduction in Wisconsin, AROW is incredibly pleased and honored to recognize the achievements of recycling industry professionals, Wisconsin businesses and local governments,” said Meleesa Johnson, AROW’s President. “This year’s recipients clearly demonstrate the caliber of our industry and the dedication of Wisconsin’s governments and businesses to continually improve recycling and waste reduction efforts in the state.

The recipient of the prestigious Christy Dixon Recycler of the Year Award was George Hayducsko, Director (retired) for Dunn County Solid Waste. This recognition is given to an individual whose career demonstrates the highest professional standards. Mr. Hayducsko was recognized for not only his dedication to recycling and waste reduction in Dunn County, but also across the state.

George has been a dedicated participant and steward in Wisconsin’s waste and recycling industry for 27 years and tackled each new project and opportunity with vigor and enthusiasm. His strong aptitude for mixing business sense and realism, along with progressive recycling initiatives, makes many of his projects win-wins (and sometimes win-win-win-wins) for all involved. His enthusiasm and commitment has shone through to both the general public and

his waste and recycling colleagues. His incredibly successful track record has brought the respect of local and state policy makers, his staff and his colleagues. George is a true advocate for recycling.

The **Outstanding Achievement in Recycling Award** is awarded to an individual or group that has excelled in their recycling program. This year two groups were honored with this award.

The Outstanding Achievement in Recycling-Public Sector was given to a joint collaboration between the cities of La Crosse and Onalaska, Wisconsin, who worked together to develop and implement automated, single stream recycling collection for their residents. Their efforts have resulted in a significant increase in the volume of recyclables collected, and have improved efficiency and safety for haulers. Citizens have embraced the program, as demonstrated by a high level of participation and customer satisfaction.

Community leaders have shown that determination to provide a convenient, easy-to-use recycling program, along with a comprehensive education program, can net big results. In fact, a recent study, conducted by the La Crosse County Solid Waste Department, indicated a 137% increase in recycling tonnage. La Crosse and Onalaska hope this program will teach residents the importance of reducing, reusing, and recycling in these communities in addition to cleaning up the neighborhood.

Outstanding Achievement in Recycling-Private/Public Partnership was given to another joint collaboration between Dane County and Landfill Reduction & Recycling, LLC of Appleton. May 2013 marked the start of Dane County Solid Waste Division's entrance into the construction and demolition (C&D) recycling business. The program, prompted by the need to better manage landfill air space, started with the construction of a nearly 21,000 square foot state-of-the-art transfer facility, specifically for C&D waste headed for recycling in Appleton. Soon, the cost of transporting bulky construction waste from Madison to Appleton started to take a big bite out of the program budget. After discussion options it became clear that a C&D recycling facility, in Dane County, was necessary. The next phase of the discussion included taking the relationship between the two entities from that of customer and service provider to a true public/private partnership.

January 2015 launched the start of the formal relationship and the construction of the \$3.2 million, 7500 square foot addition to the existing transfer facility. Dane County will own the equipment, building and land, continuing to access fees for tipping. Through a contract for

operations, Landfill Reduction and Recycling will provide operational staff, as well as specific expertise to ensure the efficient and successful operation of the facility. Once fully operational, this project will have created 20-25 jobs, preserved landfill air space and diverted valuable materials into productive use.

The **Outstanding Achievement in Education Award** is given to an individual or group that has excelled in environmental education, specifically related to solid waste and recycling. Applicants may be from the public, private or nonprofit sector. This year's award went to Elisabeth (Lis) Olson, former Recycling & Waste Reduction Communications Coordinator, Green & Healthy Schools Wisconsin Coordinator, Bureau of Waste and Materials Management - Wisconsin Department of Natural Resources (DNR). For over seven years Lis has been instrumental in advancing statewide recycling and waste reduction education efforts. She has an incredible enthusiasm for education and a creative vision for sharing information in a way that people notice.

Lis' enthusiasm strengthens municipal and county solid waste management programs by coordinating efforts with the DNR Statewide Recycling Team. She directed the "Green and Healthy Schools Program", a collaborative project between the DNR, UW-Stevens Point, and the Department of Public Instruction, with a goal of supporting and encouraging schools to have healthy, safe and environmentally friendly practices. Most importantly for AROW, Lis helped to build the very popular Recycle More Wisconsin (www.recyclemorewisconsin.org) program and its social media footprint on Facebook, preparing and disseminating hundreds of interesting and fun educational posts and materials.

AROW is a membership-based organization, serving the recycling and waste reduction interests of citizens, organizations, municipalities and businesses across the state. For those who support recycling and wish to see more waste diverted into productive use, consider joining the cause by becoming an AROW member.
