Governor Scott Walker talks a lot about jobs, but the real record does not back up his rhetoric.

GREEN BAY - From the day he took office as Governor, Scott Walker has been talking about jobs. He wants to be seen as the jobs governor, taking credit here for the economic turnaround nationwide after the disastrous crash of 2008. It seems that every time somebody hires more than three workers in Northeastern Wisconsin, Walker shows up to give a speech.

When he ran in 2010, he promised to create 250,000 new jobs in Wisconsin during his first term, and it was an elusive goal. His strategy was tax cuts for the rich and union busting, with his own state employees and public school teachers his favorite targets. Now, well into his second term, Wisconsin still flounders behind our neighbor states and his jobs goal has not been met.

So, what is the real record on Walker and jobs? Below is a brief history of Gov. Scott Walker's record on job creation, courtesy of **Brandon Weathersby** of the Democratic Party of Wisconsin.

[Wisconsin 2nd in U.S. in job losses last month, new estimates show](#)

Wisconsin was second in the nation in total job losses last month, a somewhat surprising development considering the state's unemployment rate has reached its lowest level since November 2008. Employers in Wisconsin shed an estimated 9,500 total public and private sector jobs in February, the Bureau of Labor Statistics reported late last week. Along with North Carolina (11,300 job losses) and Alaska (2,300 job losses), Wisconsin experienced a "statistically significant" decline in employment, according to a press release from the BLS.

[Wisconsin suffers fourth-highest monthly job loss under Scott Walker in August](#)

Even as its unemployment rate dipped to its lowest level since 2008, Wisconsin lost 4,300 private-sector jobs in August, according to preliminary estimates. It's the fourth-largest monthly jobs loss since Gov. Scott Walker took office in January 2011, according to figures from the U.S. Bureau of Labor Statistics' Current Employment Statistics program. The unemployment rate fell two-tenths of a point to 5.6 percent in August, but that figure and the monthly jobs

change often can be disconnected.

Frustrated Wisconsin business owner moving company to Minnesota

The owner of a Wisconsin construction company said he's taking his business to Minnesota thanks to the passage of right-to-work. The Hoffman family has been in the Wisconsin construction business for a long time. "We like to say our company got started 100 years ago this year in 1915 when my great grandfather got his first road contract," Jim Hoffman said... "I'm happy to offer the state of Minnesota a better alternative," Garofalo said. That alternative is a state that has no right-to-work law Hoffman said the move will keep his workers well paid and well trained.

Oscar Mayer plant in Madison will close; headquarters to move to Chicago

Madison's Oscar Mayer plant — a fixture on the East Side for nearly 100 years — will close and its headquarters will move to Chicago, putting 1,000 employees out of work, parent company Kraft Heinz announced Wednesday.

The loss of one of Madison's signature companies is part of a plan by parent company Kraft Heinz to close seven factories in the U.S. and Canada, four months after the two food giants merged.

Wisconsin ranks dead last in startups

According to a report issued last week by the Ewing Marion Kauffman Foundation, Wisconsin is now last in the nation in new startup activity. The state fell five spots, from 45th to 50th, the report said, putting it behind West Virginia, Minnesota, Pennsylvania, and Alabama among the bottom five states. The top five states on the Kauffman list were Montana, Wyoming, North Dakota, Colorado, and Vermont.

Uncertainty growing after several Wisconsin companies announce job cuts, relocation

Almost 200 jobs are about to leave a company that has been a staple in Racine for generations. S.C. Johnson announced, Thursday, it is relocating 175 positions to Chicago. This comes after a number of other companies across the state recently announced layoffs. Joy Global in West Allis announced in September that more than 100 union and non-union workers would be temporarily laid off. Oscar Mayer is cutting nearly 1,200 jobs in Madison and General Electric announced in September it's plan to cut hundreds of jobs. When you have job loss anywhere, it's always a little uncomfortable at the onset. While not everybody is losing sleep, they may be feeling a little uncertain. Some of that uncertainty is growing in Racine after people learned of the jobs at S.C. Johnson moving to Chicago.

Wisconsin layoff notices topped 10,000 in 2015

Wisconsin employers notified the Department of Workforce Development (DWD) of 10,104 planned layoffs in 2015, a new high for Gov. Scott Walker's administration and the most in the state since 2010.

Manitowoc Company Moving To Pennsylvania, 528 Jobs Leaving Wisconsin

A major employer is closing its plant in Manitowoc, putting more than 500 employees out of work when it moves its crane manufacturing operations out of the state. The closure of Manitowoc Crane is the latest in a string of factory shutdowns that have affected the city. The

company will remain open until it completes its current projects. It's expected to close the manufacturing facility in stages beginning this year until it fully closes in 2017 when it moves. The company said it can save up to \$30 million a year by leaving. It has been in Manitowoc since 1902.

[Wisconsin lost 8,500 private sector jobs in September](#)

Wisconsin lost more than 10,000 non-farm jobs in September, including 8,500 in the private sector. But the state's unemployment rate also declined to its lowest level since early 2001, according to data from the U.S. Bureau of Labor Statistics. The state lost a seasonally adjusted 10,500 nonfarm jobs in during the month, including both the public and private sectors. Many of the jobs lost were in the leisure and hospitality industry with a drop of 4,000. The non-seasonally adjusted figures show the state losing 22,100 jobs in that sector alone as the summer tourism season came to an end. Labor force participation increased slightly to 68.4 percent with 3,132,300 people in the civilian labor pool. The unemployment rate was down from 4.2 to 4.1 percent, the lowest level since February 2001, according to the state Department of Workforce Development.

[Why does Wisconsin lag at job creation?](#)

It's a question that's dogged Scott Walker for years, and one that's sure to keep nipping at his heels as he runs for president: Why is Wisconsin in the bottom third of states when it comes to creating jobs? It's a perplexing question, and one that has had many observers scratching their heads. Unemployment is down, labor force participation is in line with other states. But despite his promise to create 250,000 jobs during his first term, Walker was only able to deliver about half that, leaving the Badger State with a dismal 35th place in private sector job growth rankings over the course of his first four years in office.

[Wisconsin ranks 38th in private-sector job growth in 2015](#)

Wisconsin has fallen to 38th in the country in yearly private-sector job growth. Preliminary, seasonally adjusted estimates for December, released Tuesday by the Bureau of Labor Statistics, showed that Wisconsin added 23,600 private-sector jobs in 2015 for 0.96 percent growth. By percentage, 37 states did better between December 2014 and December 2015, including all but two other Midwest states. Only Illinois at 45th (loss of 2,800 jobs, minus-0.06 percent growth) and North Dakota at 50th (loss of 18,700 jobs, minus-4.8 percent growth) were lower among the 10-state Midwest group.

[Wisconsin ranks last again for start-ups](#)

According to the report released Thursday by the respected Ewing Marion Kauffman Foundation, start-up activity in the U.S. overall rose in 2016 for the second year in a row. But among the 25 largest states, Wisconsin came in either last or second-to-last in each of the three categories the foundation evaluated.

[Wisconsin ranks 33rd in job creation](#)

As employment in Wisconsin's massive manufacturing sector switched into reverse, the state continued to lag the nation in the latest quarterly census of job creation. Wisconsin added 37,166 private-sector non-farm jobs in the 12 months from March 2015 through March 2016, a tally that includes non-manufacturing as well as manufacturing positions, amounting to a
